Press release: Eslöv, Sweden – 07.12.2007

## **Positive Gaming proudly announces the revolutionary new professional Impact series of dance platforms in February 2008**

Positive Gaming, Europe's leading developer and manufacturer of quality machine dance solutions including software, hardware, accessories and tournament systems, is proud to announce its new professional Impact series of dance platforms in February 2008. Developed over the last 2 years, these dance platforms incorporate qualities never seen before outside of the arcades. Fine-tuned accuracy, low weight (appr. 10 kg), extreme durability, easy to handle, all rounded edges, arcade style and interchangeable parts are only a few key words to describe these new platforms.

The professional Positive Gaming Impact series of dance platforms will be available for both the fitness/school markets as well as for the home-user.

Positive Gaming was behind making machine dance into an official world sport and dance discipline and is the main driving force, investor as well as a co-developer of the world's first commercial wireless multiplayer dance game system.
